Allowable Subject Matter

1. Claims 1-21 are allowed.
2. The following is an examiner's statement of reasons for allowance: There is no teaching or suggestion in the prior art of the claimed combination having a motor linkage coupled between the output shaft and the derailleur linkage to move the chain guide between a first shift position corresponding to the first rotational position and a second shift position corresponding to the second rotational position in response to rotation of the output shaft, the motor linkage including a jamming protection arrangement that is configured and arranged with respect to the derailleur linkage to move between a force transmitting state in which the motor linkage forms a rigid force transmitting connection to move the chain guide and a force override state in which the motor linkage forms a non-rigid force overriding connection due to a jamming force being transmitted by the derailleur linkage to the motor linkage, such that the motor can rotate to the first rotational position from the second rotational position when the chain guide is jammed in the second shift position; re claim 2, a motor linkage operatively coupled between the output shaft and the derailleur linkage to move the chain guide in response to rotation of the output shaft, the output shaft including an eccentric drive pin that is offset from a rotational axis of the output shaft; re claim 3 the jamming protection arrangement includes a saver link pivotally coupled to the derailleur linkage and a biasing element operatively coupled between the saver link and the derailleur linkage to urge the saver link from the force override state to the force transmitting state such that a substantially rigid connection is normally maintained between the saver link and the

derailleur linkage; re claim 16, a mechanical adjustment device configured and arranged to change at least one of first and second shift positions of the chain guide relative to the fixing body, the mechanical adjustment device including includes an adjustment screw threadedly coupled to one of the motor linkage and the derailleur linkage with a free end of the adjustment screw contacting one of the motor linkage and the derailleur linkage in which first adjustment screw is not threadedly coupled thereto.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
